SAFETY AND SURVELLIANCE

ITRES[®]

BIG DATA GUARD AI LOGISTIC

The AI logistics module is capable of tracking and cataloging anything in real time simply through video streams, eliminating the need for costly systems such as RFID or barcodes. This solution avoids the use of expensive maintenance intensive drones or equipment, optimizing the deployed personnel to the maximum Virtual

WAREHOUSE

Simplicity is the key to our system. Through our ground control centers or any object producing video streams, we can dynamically apply the module to any logistics situation without the need for complicated tracking systems and without the high maintenance costs associated with drones and RFID gates

VIRTUAL TAG[®] SYSTEM

Through our proprietary Virtual Tag[®] system for automated monitoring and traceability of warehouse stocks, we can track and count anything, even highly complex objects. The system is designed to reduce the number of full time equivalent (FTE) personnel involved in inventory counting activities, through fully automated processes, optimizing their deployment only when strictly necessary

SAFETY AND SURVEILLANCE

The safety of personnel is a fundamental factor for the company; preventing accidents through the control of processes increases safety and efficiency for our customers. The Big Data AI Logistic system has all the models needed to monitor equipment, personnel, routes, areas, and everything necessary to achieve the goal: efficiency
